DETAILED ACTION

Response to Arguments

1. In view of the Appeal Brief filed on 18 January 2005, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 7, 12, 19, 22 and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Seazholtz et al., U.S. Patent 5,812,786, hereinafter Seazholtz.

Art Unit: 2663

4. Referring to claims 1, 7, 12, 19, 22 and 23, Seazholtz teaches in figure 2 the present invention in an ATM network. ATM networks are especially well suited for use with variable rate/variable mode ADSL/AVR's (a point to point DSL communication service). All ADSL/AVR transmission, including signaling and control channels, is handled by the ATM network (messaging is carried in an engineering operations channel in the form of a sequence of ATM Adaptation Layer (AAL) minicells over the line) (column 15, line 65 - column 16, line 15). Figure 2 also teaches an ATM switch (22 and 101) serving the termination equipment and the subscriber terminal (first and second management system).

Allowable Subject Matter

5. Claims 2, 4-6, 13, 20, 21 and 24 are allowed.
6. Claims 15-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
